INDEX TO VOLUME XXXIII.

A.

Academy of Natural Sciences of Philadelphia, catalogue of the library of, 181.
Afzelius, Prof. Adam, decease of, 211.
Air pump, new, description of, 237.
Alembic for distilling amalgam of gold, 66.
Andrews, Arza, on a solvent of caoutchouc, 400.
Animal magnetism, 184.
Animation, suspended, 292.
Apparatus and experiments, electro-magnetic, 190.
Argas Persicus, 271.
Arkansaw, hot springs of, 202.
Atmosphere, general view of, 50.
——— stratification and elevation of the currents of, 52.
Atmospheric currents, circuitous character of, 61.
August meteoric shower, characteristics of, 359.
Aurora borealis in summer, 297.
——— of July 1, 1837, 143.
——— notice of, 212.

B.

Barometer, remarks on, 345.
——— variations of, 262.
Barometrical observations, 310, 320.
Bones of the mammoth, 201.
Boston Journal of Natural History, 180.
Boulders, river, wear of, 315.
Breezes, land and sea, 65.
British Association for the advancement of science, 194.
——— seventh meeting of, 265.
Buckland's Bridgewater treatise, 112.

C.

Calymene Rowii, 406.
Caoutchouc, solvent of, 400.
Chemistry, technical, elements of, 204.
Chester County, Pa., flowering and filicoid plants of, 183.
Cistern, hydro-pneumatic, 246.
Clarke, E. M., description of a magnetic electrical machine, 213.
——— description of the Electrepeter, 224.
Clouds, fogs and rain, 54.
Collapse of a reservoir, cause of, 242.
Combustion, spontaneous, 147, 199, 200.
Connecticut, notice of Prof. Shepard's report on the geological survey of, 151.
Copper, in Connecticut, 160.
Count Rumford, sketch of the early history of, 21.
Cryophorus, improved, 244.
Crystals, on the drawing of figures of, 30.
Culinary paradox, 248.
Currents of the atmosphere, stratification and elevation of, 52.

D.

Dana, J. D., crystallographic examination of eremite, 70.
——— on the drawing of figures of crystals, 30.
Darlington's Flora Cestrica, 183.
Davenport's electro-magnetic machine, 193.
Dean, James, notice of an aurora, 212.
Deccan, statistics of, 274.
Desert between Suez and Cairo, geology of, 288.
Deserts, 261.
Dewey, C., on the aurora borealis of July 1, 1837, 143.
——— on the bones of the mammoth, 201.
——— on the rocks of New York, 121.
——— on the temperature of Lake Ontario, 403.

E.

Ebullition by cold, 248.
Edwardsite, measurement of, 202.
Electrepeter, E. M. Clarke's, description of, 224.
——— new form of, 377.
Electrical excitement, extraordinary case of, 394.
Electro-magnetic apparatus and experiments, 190.
——— instrument, revolving, 188.
——— machine, Davenport's, 193.
——— telegraph, Morse's, 185.
Electro-magnetism, as a moving power, 118.

Electro-magnetism, experiments in, 118.
——— pamphlet on, 193.
Electrotome, new form of, 378.
Elemente der technischen Chemie, 204.
Elevation and subsidence, proofs of modern, 97.
——— temperature of, 52.
Encrinite, tufa, &c. 405.
English lexicography, contributions to, 324.
Eremite, crystallographic examination of, 70.
Essex County, N. Y., visits to the mountains of, 301.
Ether, nitric, process for, 241.
Excitement, electrical, extraordinary case of, 394.

F.

Feet, impressions of, in rocks, 398.
Ferussac, Baron, biographical notice of, 78.
Figures of crystals, on the drawing of, 30.
Fire bricks and hearth stones for furnaces, 202.
Flora Cestrica, 183.
Fogs, clouds and rain, 54.
Fossil plants, 270.
——— remains of the Toxodon, &c. 208.
Fox, Charles, on the motion of melted grease in a candle while burning, 198.
——— R. W., questions relative to mineral veins, 135.
Furnaces, fire bricks for, 202.

G.

Galvanic influence, crystallization of metals by, 267.
Galvanometer, thermoscopic, 365.
——— astatic, 376.
Gaylord, Willis, on the influence of the great lakes on our autumnal sunsets, 335.
Geological Society of London, Mr. Lyell's address to, 76.
——— survey of the state of Connecticut, notice of, 151.
Geology, foreign, 95.
——— Lyell's, 182.
——— of the British Isles, 79.
——— of the desert between Suez and Cairo, 288.
Gibbs, J. W., contributions to English lexicography, 324.
Gold, alembic for distilling amalgam of, 66.
Gravel, boulders, &c. 287.
Grease, melted, motion of, in a candle while burning, 198.
Greece, mineral resources of, 207.
Green, Jacob, description of a new Trilobite, 406.
——— remarks on the genus Paradoxides of Brongniart, and on preserving the genus Triarthrus, 341.

H.

Hail, 55.
Hall, F., notice of oriental minerals, 249.
——— James, descriptions of two species of Trilobites, belonging to the genus Paradoxides, 139.
Hare, Robert, description of an air pump of a new construction, 237.
——— letter from, to Dr. Dalton, 195.
——— on sundry improvements in apparatus, or manipulation, 244.
——— on the cause of the collapse of a reservoir, 242.
——— process for nitric ether, 241.
Haskins, R. W., on the theory of a resisting medium, 1.
Herrick, E. C., on an annual meteoric shower in August, with remarks on shooting stars in general, 354—supplementary facts on meteoric showers in August, 401.
——— on the aurora borealis of July 1, 1837, 144.
——— on the occurrence of the aurora borealis in summer, 297.
——— on the shooting stars of August 9th and 10th, 1837, and on the probability of the annual occurrence of a meteoric shower in August, 176.
Hoffmann, Prof. Frederick, biographical notice of, 76.
Holland, observations in, 228.
Hosford, Willard, on an extraordinary case of electrical excitement, 394.
Hudson river, exploring visits to the sources of, 301.
Hurricane in Ohio, Oct. 20, 1837, 368.
Huxham's Auroral Register, abstract of, 298.
Hydro-pneumatic cistern, 246.

I.

Ichnolites, newly discovered, 201.
Iconography and general species of recent shells, 184.
Impressions in sandstone, 271.
——— of feet in rocks, 398.
Insects, method of destroying, 273.
——— not produced by galvanism, 272.
Instruments, mathematical, philosophical and chemical, 408.
Interruptor or electrotome, new form of, 378.
Iolite, new locality of, 399.
Iron, 266.
——— cast, properties of, 292.
——— corroding of, by salt water, 286.
——— in Connecticut, 155.
——— meteoric, 257.

J.

Johnston, John, sketch of the early history of Count Rumford, 21.

Jones, George, observations in Holland, connected with our prairie region, 226.

L.

Labradorite, 303.
Lake Ontario, temperature of, 403.
Land and sea breezes, 65.
Lethæa Geognostica, 204.
Lexicography, English, contributions to, 324.
Library of the Academy of Natural Sciences of Philadelphia, catalogue of, 181.
Locke, John, on a new thermoscopic galvanometer, 365.
Loomis, Elias, observations on a hurricane in Ohio, Oct. 20, 1837, 368.
Lyell, Charles, address of, at the anniversary meeting of the Geol. Soc. of London, 76.
Lyell's Geology, first American edition of, 182.

M.

Magic, natural, 258.
Magnetic electrical machine, description of, 213.
Magnetism, animal, 184.
Magnets, 265.
——— improved mode of constructing, 200.
Mammoth, bones of, 201.
Mantell, Gideon, lecture on zoophytes, 328.
Mather, W. W., protest of, 205.
Maury, M. F., description of an alembic for distilling amalgam of gold, 66
McConnell, B. R., notice of a revolving electro-magnetic instrument, 188.
Mease, James, on spontaneous combustion, 147, 199, 200.
Medium, resisting, examination of the theory of, 1.
Metals, crystallization of, by galvanic influence, 267.
Meteor at Rochester, N. H., 200.
——— brilliant, seen in the day time, 402.
Meteoric iron in Texas and France, 257.
——— shower in August, probability of the annual occurrence of, 177—further proof of, 354—supplementary facts upon, 401.
Meteoric shower of November, 1837, 379.
Meteoric showers, number of, in a year, 360.
Meteorological observations, 348.
——— sketches, 50, 261.
Meteors of Aug. 9th and 10th, 1837, and of Nov. 12th and 13th, 1832, 133.
Minerals, oriental, notice of, 249.
Mineral veins, 93.
——— questions relative to, 135.
Molecular forces, disturbance of, by magnetism, 118.
Morse's electro-magnetic telegraph, 185.
Mountain slides, phenomena of, 313.
Multiplier, rotary, 376.

N.

Naïades, synopsis of the family of, 402.
Natural History, Boston Journal of, 160.
——— magic, 258.
New York, queries respecting its geology, 124.
——— rocks of, 121.
Nitric acid, action of, on certain metals, 286.
——— ether, process for, 241.

O.

Ohio, hurricane in, 368.
——— prairies of, 230.
Olmsted, Prof. D., on the meteoric shower of November, 1837, 379.
Ontario, Lake, temperature of, 403.
Organic remains, 103.
Oriental minerals, notice of, 249.

P.

Page, C. G., electro-magnetic apparatus and experiments, 190.
——— experiments in electro-magnetism, 118.
——— on galvanic and electrical apparatus, 376.
Paradoxides Beckii, 142.
——— Eatoni, 142.
——— of Brongniart, remarks on, 341.
Physiology, vegetable, 290.
Plants, fossil, 270.
Platina, fusion of large masses of, 195.
Porcelain, English and German, difference between, 407.
Prairie region of the United States, 226.
Prairies of Ohio, 230.
Protest of Lieut. Mather, 205.

Q.

Queries proposed by the geologists of the new survey of the state of New York, 124.
Questions relative to mineral veins, 135.

R.

Rae, John, on the effect of solar heat in raising a balloon, 196.
Rail-roads and canals in the United States, 296.
Rain, fogs and clouds, 54.
Redfield, W. C., account of two visits to the mountains in Essex County, N. Y., with a sketch of the northern sources of the Hudson, 301.

Redfield, W. C., meteorological sketches, 50, 261.
Remains, organic, 103.
Revolving electro-magnetic instrument, 188.
Rocks, impressions of feet in, 398.
——— of New York, 121.
Rotary multiplier, 376.
Rumford, Count, sketch of the early history of, 21.
Ruschenberger, W. S. W., remarks on the barometer, with a table of meteorological observations, 345.

S.

Sandstone, impressions in, 271.
——— of Connecticut, 169.
Schaeffer, Geo. C., on the meteors of August, 1837, and November, 1832, 133.
Sclerotic bones of the eyes of birds and reptiles, 289.
Sea breezes, 65.
Sediment in the river Mersey, 269.
Shells, recent, general species and iconography of, 184.
Shepard, C. U., notice of his report on the geological survey of Connecticut, 151.
Shooting stars, nature, motions, and number of, 360.
——— of Aug. 9th and 10th, 1837, 176.
——— remarks on, 354.
——— theory of, 363.
Shower, meteoric, of November, 1837, 379.
Showers, meteoric, in August, 177, 354, 401.
——— number of, in a year, 360.
Silk worm, new, 206.
Sketches, meteorological, 50, 261.
Slides, mountain, phenomena of, 313.
Solar heat, effect of, in raising a balloon, 196.
Spontaneous combustion, 147, 199, 200.
Spots on the sun, 393.
Springs, hot, of Arkansaw, 202.
Stars, shooting, nature, motions, and numbers of, 360.
——— of Aug. 9th and 10th, 1837, 176.
——— remarks on, 354.
——— theory of, 363.
Statistics of the Deccan, &c., 274.
Statistics of trade between Great Britain and the United States, 277.
Subsidence and elevation, modern, 97.
Sun, spots on the, 393.
Sunsets, autumnal, influence of the great lakes on, 335.
Synopsis of the family of Naiades, 402.

T.

Telegraph, Morse's electro-magnetic, 185.
Temperature of elevation, 52.
——— of Lake Ontario, 403.
Theory of a resisting medium, examination of, 1.
Thermoscopic galvanometer, 365.
Thunder storms and gusts, 56.
Tides, 266.
Toxodon, fossil remains of, 208.
Trade, statistics of, between Great Britain and the United States, 277.
Trade winds and the circuitous character of the atmospheric currents, 61.
Trap dyke, 316.
Triarthrus, necessity of preserving the genus, 341.
Trilobite, new, description of, 406.
Trilobites, descriptions of two species of, 139.
Tufa, calcareous, 406.

V.

Vegetable membrane and fibre, chemical composition of, 289.
——— physiology, 290.
Veins, mineral, 93.
——— questions relative to, 135.
Voyage, new, round the world, 206.

W.

Water, decomposition of, 217.
Water-spouts and whirlwinds, 58.
Waves, mechanism of, in reference to steam navigation, 283.
Whirlwinds and water-spouts, 58.
Winds, trade, 61.
World, new voyage round the, 206.

Z.

Zodiacal light, 390.
Zoophytes, Dr. Mantell's lecture on, 329.

DO NOT CIRCULATE
